

Project Structure

Information architecture

The website will be five apps and each app has its own html pages, admin, apps, models, view and urls. It has also a root static folder, which will have static files in it, and a template folder to have the template files. They will provide all sorts of related information and functionality but the focus will be possibility of ordering food items online and customers being able to create their own users and see their own ordering histories.

1. Product app to CRUD the products.
2. Static folder to show all the static files like, js, css and other pdf files.
3. Templates to have all the templates like, bas.html, toasts files and allauth files.
4. Checkout app to have our checkout pages and confirmation emails.
5. Profiles to have all the related information about profiles.

As it shows bellow
